

### Intern Requirement

No. of students required	1
Preferred Discipline	<ul style="list-style-type: none"><li>• Computer Science/Computer Engineering</li><li>• Information Systems Management</li></ul>
Prerequisites/ Skills Required	<ul style="list-style-type: none"><li>• Familiar with Javascript/PHP</li><li>• Familiar with social networking sites like Facebook</li></ul>

### Project Details

Title	Sharing Social Stories
Overview/Background	Social networking sites provide a wealth of information, including photos, videos and posts which may be tagged with friends and locations. However this information is often disjoint and disorganized, when it could be used to tell a coherent story if presented neatly. For example, a group of friends who went on holiday together could organise their posted items on social network graphs, timelines and location maps to share with others.
Objectives/Scope/ Deliverables	<p>The aim of this project is to explore how related information (e.g. tagged photos, videos, comments, status updates) from social networking sites like Facebook and Google+ can be presented in an intuitive and meaningful manner.</p> <p>The intern is required to develop an application on a social networking site of their choice (e.g. Facebook, Google+, Friendster, LinkedIn) that consolidates the activities of a group of people using items posted on their profiles.</p>
Project Duration	6 months
